Attractiveness, greening and valorization of industrial wasteland during pre- and post-sanitation periods

1850-1980 chemical product factory

Highly polluted
by heavy metals and PAHs

WP1 Identification of plant species adapted to the polluted site

WP2 Soil characterization

1. Physico-chemical properties
2. Heavy metal and PAH content

WP3 Rapeseed and adapted plant species

1. Characterization of field and lab grown plants
2. Determination of the best adapted genotypes
3. Determination of the yield in high-added value molecules

WP4 *In situ* planting
